CEDAR VALE CHAT PILOT SERVICES AGREEMENT

Effective 17 February 2026

This Pilot Services Agreement (Agreement) is between Cedar Vale Autism Support, an Illinois nonprofit corporation (CVAS), and Lantern Bridge Digital (LBD). The parties agree to the hosted pilot described below. Exhibit A is part of this Agreement. The CVAS quality standard identified in section 1.5 was provided to LBD at execution and states the agreed chatbot response expectations.

1. Defined terms

1.1 **Business Day** means a Monday through Friday other than a federal holiday observed in Illinois.

1.2 **Conversation Record** means member and assistant message text with associated timestamps, role labels, and pseudonymous session or member identifiers maintained for the Service.

1.3 **High-Risk Event** means content that the Service's automated high-risk function identifies and categorizes for notice to CVAS. The event time is the time recorded by that function for the identified content.

1.4 **Member** means an adult enrolled by CVAS for this opt-in pilot. CVAS may accept self-identification as autistic and does not require a diagnostic record from a Member.

1.5 **Quality Standard** means CVAS's Cedar Vale Chat adult peer-support quality standard approved 12 February 2026, as supplied to LBD at signing. It governs expected chatbot response behavior.

1.6 **Service** means the hosted Cedar Vale Chat text interface and the supporting routing, records, and reporting functions LBD provides under this Agreement.

1.7 **Pilot Term** means 1 March through 31 August 2026. A continuity extension under section 10 does not enlarge the Pilot Term or its measurement period.

1.8 **Service End** means the date access under this Agreement and any written continuity extension actually stops.

2. Pilot service and allocation of roles

2.1 LBD will operate the Service for Members whom CVAS authorizes. It is intended for peer-style conversation, practical problem solving, and resource navigation. It is not therapy, diagnosis, emergency response, or a human peer service. CVAS controls enrollment, its human peer program, and decisions about staff contact.

2.2 LBD will configure the Service for the Pilot Term using the initial settings in Exhibit A. The user-facing service will identify the assistant as AI and show the agreed human-support and urgent-help pathways. The Service may be used outside CVAS staff hours, but that availability does not make CVAS staff available around the clock.

2.3 The Quality Standard supplies the response-behavior requirements for the Service; this Agreement allocates each party's operational and data duties. A material change to response behavior or safety routing follows section 6.

3. Member-facing support and human handoff

3.1 LBD will maintain AI disclosure at entry and will not configure the assistant to describe itself as a clinician or human peer. The assistant may help a Member ask for CVAS follow-up, but a request is not a live conversation with staff.

3.2 CVAS peer workers are ordinarily available Monday through Friday, 09:00-18:00 Central time. Outside those hours the chatbot may record a follow-up request with the Member's consent, but it must not promise an immediate CVAS reply. For urgent safety needs it will point to 988 or emergency services as appropriate under the Quality Standard.

3.3 CVAS is responsible for reviewing notices delivered to its review channel and for deciding whether and how staff contact a Member. LBD will not describe automated notice delivery as live monitoring, emergency dispatch, or a completed clinical intervention.

4. Automated high-risk notices

4.1 LBD will operate a high-risk content flagging function. Within ten minutes after the system identifies a High-Risk Event, LBD will send a notice to the CVAS review channel designated in writing before launch. The notice will include event time, pseudonymous session identifier, event category, and delivery status.

4.2 LBD will maintain a retrievable record of identified events, notice attempts, and delivery results so the parties can reconcile the notices. If an initial delivery fails, LBD will retry through the configured route and record the exception.

4.3 LBD will investigate a known routing failure and give CVAS a practical status update. CVAS remains responsible for staff review after receipt and for keeping its own contact records.

5. Operations and monthly packet

5.1 Within five Business Days after each Pilot Term month, LBD will provide an operations and quality packet showing session volume, distinct active accounts, availability, high-risk flag counts and delivery exceptions, material Service incidents known to LBD, and release changes. The packet may also show use of the human-support link where that measure is captured.

5.2 The packet is operational reporting drawn from Service records. CVAS retains responsibility for judging conversation quality and Member experience. If LBD discovers a material error in a prior packet, it will identify the correction in a later communication to CVAS.

5.3 LBD will tell CVAS of a material Service interruption or known notice-delivery problem as soon as reasonably practical and provide status until the problem is resolved or a workaround is in place.

6. Change control

6.1 LBD will give CVAS written notice at least ten Business Days before a material change to the model configuration, safety routing, or user-facing response behavior. The notice will describe the expected scope and planned rollout date.

6.2 LBD will obtain CVAS's written approval before deploying such a change to the pilot Service. LBD will record the production switch time and release designation and include the change in the applicable monthly packet.

6.3 Routine maintenance that does not materially alter those functions may proceed in the ordinary course. If it affects availability or causes a material incident, LBD will report it under section 5.

7. Conversation records and permitted use

7.1 CVAS may request and receive an export of pseudonymized Conversation Records and safety-event records from the start of the Pilot Term until Service End, including during an exercised continuity extension. LBD will provide a usable text or common tabular export with session identifiers and timestamps. CVAS determines retention of its exported copy.

7.2 LBD may process pilot conversations only to provide, secure, support, and report on the contracted Service. LBD will not use them to train or fine-tune a general or customer-specific model and will apply the same restriction to any provider it uses for this pilot.

7.3 Routine packets will not include Members' direct identifiers. Neither party will publish Member messages or disclose direct identifiers in ordinary Service reporting. Each party will limit access to Conversation Records to people whose duties require it.

7.4 Within thirty days after Service End, LBD will delete its copy of Conversation Records and related Member-level records, after allowing CVAS to complete its agreed export. A legal preservation duty may delay deletion only to the extent required and must be disclosed to CVAS. LBD may retain aggregate totals without message text or Member identifiers for ordinary accounting and security records.

8. Security and incident coordination

8.1 LBD will use reasonable administrative and technical controls for access to the hosted Service and its records, including restricting routine access to authorized support personnel. CVAS will protect any exported copy under its own record-handling procedures.

8.2 If LBD learns of unauthorized access to pilot Conversation Records or another material data-security incident affecting the Service, it will notify CVAS without undue delay, share known facts and practical containment steps, and coordinate any Member-facing notice that is required. This clause does not alter the data-use restriction in section 7.

9. Review and correction

9.1 CVAS may send documented quality concerns to LBD for review. LBD will investigate Service behavior or delivery issues within its control and give CVAS a practical response. A corrective change that is material under section 6 requires the notice and approval process there.

9.2 Neither party will represent Cedar Vale Chat as clinically validated on the basis of this pilot alone.

10. Continuity and end of service

10.1 If renewal remains under board review after 31 August 2026, CVAS may request a short written continuity extension on the same Service and data terms. It may serve only people enrolled by 31 August, permits no new enrollment, and expires no later than 31 October 2026 unless the parties sign a new agreement.

10.2 Either party may end the Service for an uncured material breach after written notice and ten Business Days to cure. A party may end it immediately if continued operation presents a serious safety or data-security risk that cannot reasonably await cure.

10.3 At Service End the parties will coordinate reasonable Member notice, the CVAS export, and deletion under section 7. Ending access does not erase duties that by their terms continue, including permitted-use restrictions and the deletion obligation.

11. General terms

11.1 Notices for a material change or termination must be in writing to the parties' designated contract contacts. Routine Service questions may go to the operational contacts in Exhibit A. Either party may update a contact by written notice.

11.2 This Agreement, Exhibit A, and the Quality Standard are the parties' full pilot arrangement. A change to these terms must be approved in writing by both parties. A delayed exercise of a right is not a waiver of that right.

11.3 Illinois law governs this Agreement. The parties may sign counterparts and exchange signed copies electronically.

AGREED AND ACCEPTED

EXHIBIT A - SERVICE SCHEDULE

This schedule records the initial Cedar Vale Chat configuration and routine deliverables as of 17 February 2026. Capitalized terms have the meanings in section 1. The Quality Standard governs response behavior; this schedule records the operating arrangement.

A. Initial service configuration

Item	Launch arrangement
Member access	Opt-in hosted text chat linked from CVAS enrollment. CVAS enrolls adults age 18 or older and may accept self-identification as autistic.
Launch release	CVC-1.4 response configuration. The assistant identifies itself as AI at entry; release changes follow section 6.
Human peer desk	CVAS staff ordinarily available Monday-Friday, 09:00-18:00 Central. Requests outside those hours wait for the next staffed period.
Urgent support	User-facing pathway includes 988 in the United States and emergency services when immediate danger warrants it. The Service is not an emergency responder.

B. Routing, records, and contacts

Item	Launch arrangement
Safety notice	Automated notice to the CVAS review channel designated before launch, with event time, pseudonymous session ID, category, and delivery status. LBD retains attempt and result records.
Monthly packet	Session volume, distinct active accounts, availability, high-risk flag counts and exceptions, known material incidents, release changes, and human-support link use where captured.
Audit export	Conversation and safety-event records in text or common tabular form with pseudonymous identifiers and timestamps, subject to section 7.
Working contacts	CVAS program: Avery Bell. CVAS agreement contact: Nina Patel. LBD delivery and agreement contact: Theo Grant. The parties may designate replacements in writing.
